Started on	Thursday, 29 August 2024, 6:20 PM
State	Finished
Completed on	Thursday, 29 August 2024, 6:26 PM
Time taken	6 mins 13 secs
Marks	1.00/1.00
Grade	<b>10.00</b> out of 10.00 ( <b>100</b> %)

```
Question 1
Correct
Mark 1.00 out of 1.00
```

Assume you are an awesome parent and want to give your children some cookies. But, you should give each child at most one cookie.

Each child i has a greed factor g[i], which is the minimum size of a cookie that the child will be content with; and each cookie j has a size s[j]. If s[j] >= g[i], we can assign the cookie j to the child i, and the child i will be content. Your goal is to maximize the number of your content children and output the maximum number.

### Example 1:

# Input:

3

123

2

11

# **Output:**

1

Explanation: You have 3 children and 2 cookies. The greed factors of 3 children are 1, 2, 3.

And even though you have 2 cookies, since their size is both 1, you could only make the child whose greed factor is 1 content.

You need to output 1.

### **Constraints:**

```
1 <= g.length <= 3 * 10^4
0 <= s.length <= 3 * 10^4
1 <= g[i], s[j] <= 2^31 - 1
```

### Answer: (penalty regime: 0 %)

```
#include <stdio.h>
 2 v int main(){
 3
         int n1;
 4
         scanf("%d",&n1);
 5
         int arr[n1];
 6
         for(int i=0; i<n1; i++){
             scanf("%d",&arr[i]);
 8
 9
10
         int n2;
         scanf("%d",&n2);
11
12
         int brr[n2];
         for(int i=0; i<n2; i++)
13
14
             scanf("%d",&brr[i]);
15
16
         int c=0;
17
         for(int i=0; i<n1; i++){
             for(int j=0 ; j<n2 ; j++){
    if(arr[i] <= brr[j]){</pre>
18
19
20
                      C++;
21
                      break;
22
             }
23
24
         printf("%d",c);
25
26
```

	Input	Expected	Got	
~	2	2	2	~
	1 2			
	3			
	1 2 3			

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.
